## Y-Suites for Microsoft Dynamics® GP

the

"Y-Suites" from Collins Computing can help YMCAs dramatically improve the effectiveness of their Microsoft Dynamics GP financial software. The Y-Suites are a collection of interfaces, customizations, and reports that combine information from the Microsoft solutions and the YMCA solutions and are exclusively available to YMCAs that purchase a Microsoft Dynamics solution through Collins Computing.

### Y-Payroll Suite

#### 403B Eligibility (1000 Hour – Both Plan Options) Report

The payroll report calculates the number of hours the employee has worked in the last one or two years. Print the report at any time to determine which employees will become eligible for your benefit plan. Based on historical hours worked, the program will make projections for when the employee is expected to become eligible for the plan.

#### Payroll Matrix

The payroll matrix simplifies the entry of timecards when the employee has worked in several departments or cost centers at multiple rates of pay. For example, an employee may work 24 hours in the day care center and 16 hours as a lifeguard.

#### Y-Vision Integration

Synchronizes the information contained in Microsoft Dynamics Payroll with Y-Vision. However, we also work with many YMCAs today to implement DAXKO to complete the integration with the payroll functions.

### Y-Connection Suite

#### Members Payables Check Interface

Information is copied from Microsoft Dynamics GP payables module to the YMCA's membership system to cross reference the Member ID, name, check number, amount, and check date.

#### General Ledger New Account Numbers

Anytime a new General Ledger record is added to the Microsoft database, a record will be created to add to the YMCA database noting the GL Account number, the user ID who created the record, and the date/time of creation.

#### Retirement (YERDI) Interface

Automatically enrolls newly eligible employees into the YERDI retirement system, then continually updates the system with relevant payroll information.

"Collins Computing has created "Y-Suite", a series of integrations, support and upgrade services specific to the YMCA's needs. We use Microsoft Dynamics GP Payroll, HR, General Ledger, and Accounts Payable modules with Collins Computing's Y-Suite to interface to DAXCO and our YERDI retirement systems. This is key to ensuring Microsoft Dynamics GP, with its seamless integration to other products we use regularly, is a good fit for our YMCA. The Y-Suite integration points allow us to balance our books without re-keying the data into two separate systems."

# Fundraising and Donor Management

According to First Research, the US non-profit institutions industry includes more than 1.4 million organizations with combined annual revenue of more than \$1 trillion. And 37% of organizations reported a decline in private contributions for the first nine months of 2010 compared to the same period in 2009. The major factors cited for the decline included fewer individuals donating and gifts of smaller amounts.\*

As a non-profit, you're well aware of the critical importance that fundraising has to the success of your organization. Collins Computing offers YMCAs end-to-end, closed loop fundraising and donor management software solution for nonprofits that runs entirely within Microsoft Outlook and is built on the industry-leading Microsoft Dynamics CRM platform.

*\*Urban Institute, The Nonprofit Research Collaborative: November 2010 Fundraising Survey*

## Fundraising software for nonprofits that works the way you do

- Donor management software with a native Outlook user experience—e-mail, tasks, calendar, and even contacts are fully integrated.
- Familiarity and ease of use mean significant increase in user adoption for staff and management, as well as a reduction in training time.

## Fundraising software for nonprofits that works the way your organization does

- Configurable workflow model supports flexible transaction processing.
- Forms, entities, tables, business rules, queries, views, and reports can be customized without programming.

## Fundraising software for nonprofits that works the way IT wants it to

- Web services architecture—connect multiple systems in real time.
- Fast installation.
- Flexible data import capability.

## Fundraising software for nonprofits that's more cost effective than competing products

- Low operating costs.
- Low implementation costs.
- Low capital expenditures (depending on the deployment model).
